In some cases, you may want to embed the virtual classroom class link or run your Enterprise LMS platform within an existing web page in your website using iFrame. **Technically, this is not supported.**

Please be aware that some functionality such as webcam and microphone detection and screen sharing does not work when you embed in an iFrame.

We strongly recommend to use the built-in white-label feature to generate custom hostname and highly-secure SSL certificate. In this way, it will work under your own domain and brand. The white-label setup does not take more than 5 minutes. Follow the links below specific to the platform of your choice:

- **Enterprise LMS** - <https://www.braincert.com/braincert-support/kb/art...>
- **Virtual Classroom API** - <https://www.braincert.com/braincert-support/kb/art...>
